

Audit and Assurance: Health, Safety and Wellbeing

HSE Global's audit and assurance service provides our clients with the most thorough and robust assessment of the **effectiveness** of their health, safety and wellbeing management systems, risk controls, safety leadership and safety culture. We delve deeply into the day-to-day behaviours, sub-cultures and leadership approaches at site and in the office.

Thanks to our extensive operational experience, we are equally as experienced working with Boards as we are in the field working with your team. We build a natural rapport with Executives, Managers, Front-line Leaders, Employees and Contractors throughout the audit and assurance process, which ensures candid qualitative research to identify any gaps, opportunities to improve and truly **test and verify** the effectiveness of system and process implementation.

Our insights highlight examples of excellence and uncover issues that impact on effective risk control and high-performance health, safety and wellbeing outcomes. Our extensive experience, empathy and understanding allow us to provide customised solutions to dramatically improve the safety performance of our clients, resulting in less injuries and incidents, enhanced wellbeing and productivity, robust governance and improved stakeholder satisfaction.

HSE Global audits are not a paperwork exercise. They find the real issues as to why risk controls are not as effective as they could be.

Audit Criteria:

With experience across all industries and supporting over 120 different organisations around the world, our knowledge, experience and capability means we can conduct the following audits:

- Independent health, safety and wellbeing management systems
- Critical control effectiveness assurance
- Verify design and/or implementation of management systems to:
 - international standards
 - internal Corporate standards
- Chain of Responsibility (CoR) systems and risk controls
- Hazard and risk compliance audits (e.g. chemical management, confined spaces, working at heights)
- Contractor management compliance audit and assurance.

Audit Methods:

Desktop Review: Verifies that the design of health, safety and wellbeing systems, processes and procedures meet specific requirements.

In-field Observation: Verifies the effective implementation and effectiveness of health, safety and wellbeing systems, processes and procedures.
