

# Facilitated Workshops: Bowtie Risk Control Analysis

Bowtie risk control analysis is a visual tool which effectively depicts risk providing an opportunity to identify and assess the key safety barriers (controls) either in place or lacking between a safety event and an unsafe outcome. It considers risk in a dynamic environment with multiple causes contributing to an event.

HSE Global consultants can facilitate bowtie risk control analysis workshops drawing down on input from your relevant subject matter experts (those that do the job). We identify the critical controls that either prevent or mitigate the consequences of material unwanted events.

*HSE Global's approach isn't just about the mechanics of risk management, it is actually about the people side of managing risk.*

Stephen Esposito, GM Operations,  
Ravensdown NZ

## For more information:

Contact: +61 2 7228 7914  
Email: [info@hseglobal.com.au](mailto:info@hseglobal.com.au)

## Delivery Methods:

**Face to Face:** 1 day facilitated workshop with your organisation's subject matter experts plus 1 day planning and data analysis.

**Online:** Workshops can be facilitated online via video conference.
