

Facilitated Workshops: Control Based Risk Management Framework

Knowing which activities in your business have potential to harm your people and more importantly, understanding if these risks are well controlled is pivotal to creating a safer workplace.

By proportionately focussing on these critical risks and critical controls, you can create a manageable programme of work that not only keeps people safe, but demonstrates to your key stakeholders that you are aware of and managing your material health, safety and wellbeing issues.

Understanding your critical risks and verifying that critical controls are in place and working effectively are key due diligence obligations for Company Officers and are the foundations for keeping your people safe from serious harm incidents.

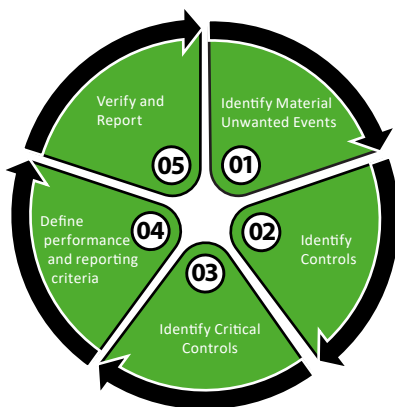

By defining unwanted events, identifying critical controls and verifying the effectiveness of those controls, organisations can be assured that:

- Critical risks and controls are known and
- What we think is happening in practice is actually happening.

HSE Global can help you understand your risks from both a data analysis and people focused perspective and then determine what is critical and what is not from a risk and control perspective.

Control Based Risk Management Framework

HSE Global's approach isn't just about the mechanics of risk management, it is actually about the people side of managing risk.

Stephen Esposito, GM Operations, Ravensdown NZ

Our Control Based Risk Management Framework helps organisations do this effectively and efficiently. Using our extensive industry experience, we help teams develop a framework to:

- Identify their critical risks and controls
- Verify the effectiveness of those critical controls
- Build internal capability for ongoing monitoring activity and provide external assurance of control effectiveness.

Delivery Methods:

Face to Face: 1 day facilitated workshop with your organisation's subject matter experts plus 2 days planning and data analysis.

Online: Workshops can be facilitated online via video conference.
